# METROPOLITAN

Flexible lightweight aluminium  
buildings

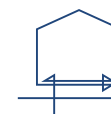

**HTS**  
TENTIQ

# High Rise Structures

**Ridge height**  
Up to 20.00 m

**Clear-span width**  
Up to 70.00 m

**Eave height**  
Up to 14.00 m

The "Metropolitan" is the first building launched from our newly developed High Rise Structures series. HTS TENTIQ High Rise Structures set a new benchmark for lightweight aluminium buildings.

The Metropolitan is the perfect choice for major events, film productions, as a stage for cultural events such as temporary exhibitions and musicals, as well as for industry and for storage. These structures impress with their particularly flexible and rapid installation, as well as their multifaceted utilization options. They offer a variable service life, which is also beneficial: the Metropolitan can be erected on a temporary or on a permanent basis.

The potential for using the space allowed by the clear-span widths is compelling, especially in the event business: A width of up to 70 m with no support structures to get in the way allows optimal use of the space.

## Features

- Very high suspended loads - up to 150kg/m - corresponds to 6 tons of suspended load per frame with a width of 40 m
- Roofing: insulated thermo covers or permanent roofing with sandwich elements
- Wall cladding: attractive Avantgarde glass facade or insulated Avantgarde panels

Clear-span widths up to

**70 m**

Extendable in increments of

**5 m**

Eave heights up to

**14 m**

Exact pitch of A-frame roof

**5°**

Suspended loads up to

**6 t**

Free-standing area over

**5,000 m<sup>2</sup>**
